

DUTCH DREDGING SIMULATORS

Deep Knowledge Of Dredging

Profound knowledge of the dredging process, dredging equipment and an extensive network within the industry.

Realistic Simulation

The simulator is renowned for its realism, replicating the dredging process as realistic as can be.

Automation

Usage of high-end maritimised hardware in combination with simulation software modules.

Portable

Programmable hardware results in smaller simulators and superior user friendliness.

Affordability

By using standard hardware and in-house developed applications, the costs are kept to a minimum.

Training Operators

With this simulator operators learn to find the limits of the equipment and to maximize the performance.
